Final Project Deliverables

Due: Friday, 4/30/21 11:59PM

Final Project Deliverables:

1. Final Project Report
   Final Project Reports Format guidelines:

   These reports are to be a six to ten page description of your final projects. The basic outline should be:
   a. Abstract (1 paragraph)
   b. Introduction to the problem (background and motivation)
   c. Description of the technical approach to the solution of the problem (methods)
   d. Contributions – In this section clearly define what part of the project is solely your own work, versus what functionality/code/ideas/datasets are from outside sources. Be sure to include complete references for any of these outside sources.
   e. Experimental design (validation of your approach)
   f. Experimental results
   g. Conclusions (What worked, what didn't, what would you do differently if you had more time)
   h. References

   These reports are to resemble a single column technical paper such as would be presented at an IEEE/ACM conference. Be sure to include enough details so that your work is fully explained. Diagrams are often helpful and can also be used in your formal oral presentation of projects.
2. **Optional** Oral Presentation (video)
3. Any PowerPoint or other slides that you generated to help with the oral presentation.
4. Code including all files necessary to run/compile your project, or link to a GitHub or other repository that I can view.

Be sure to upload the files to blackboard by 4/30/21. For large files, a link to the content is fine.
